

Scheduler what I want? I think some people are aware what what to do, but some people are not aware and they keep asking how to do this. So for the benefit of everyone.

Godwin, Joshua 0 minutes 22 seconds

I will quickly go over if you want to debug something on scheduler. It's very easy.

Godwin, Joshua 0 minutes 32 seconds

Why? Because I created something which we can use.

Godwin, Joshua 0 minutes 42 seconds

Quads listener.

Godwin, Joshua 0 minutes 45 seconds

OK and.

Godwin, Joshua 0 minutes 49 seconds

So.

Godwin, Joshua 0 minutes 51 seconds

You can even. You can even safely run some things that you want on prod. So what do I do whenever I want to check something I simply.

Godwin, Joshua 1 minute 6 seconds

Comment out everything.

Godwin, Joshua 1 minute 10 seconds

And you and uncomment some you know.

Godwin, Joshua 1 minute 15 seconds

I think so. Comment comment.

Godwin, Joshua

37 minutes 46 seconds37:46

Godwin, Joshua 37 minutes 46 seconds

If you see this object mapper wherever it is, wherever it is used, it will always be injected with this particular you know properties that you sent and also.

Godwin, Joshua 38 minutes 4 seconds

It's actually, you know, it's gonna save memory. It's better memory management for you when you instantiate by yourself. Obviously you you are allocating memory you are, you know, instantiating and you're instantiating it, instantiating it, you know, over the full.

Godwin, Joshua 38 minutes 22 seconds

Application or the full method you will instantiate it in multiple places and it will, you know remain there. You don't do any clean up nothing, but when you inject it through you know the spring, this thing, the spring life cycle of the bean will will you know.

Godwin, Joshua 38 minutes 43 seconds

Take care of how to handle this particular instance that you have. That is one benefit and also most of the beans are loaded. I think you can also configure it. You can load it just in time when you need it. You can do a lazy load.

Godwin, Joshua 39 minutes 2 seconds

Yeah.

Godwin, Joshua 39 minutes 3 seconds

Or you can and I I I don't. I have to check this. I think by default you know it is loaded on startup and made available to you for this thing. But you can also you know configure this to load just in time.

Godwin, Joshua 39 minutes 22 seconds

So that's the benefit that you get, you know from using it from a central, you know spring managed.

Godwin, Joshua 39 minutes 30 seconds

Beam. OK, next one more thing that I wanted to touch connectors we repeat this code over and over and over and over again so.

Godwin, Joshua 39 minutes 46 seconds

What we have the on premise connector and what we need to do here. I think almost everybody by now would be aware that for the on premise connector you would need.

Godwin, Joshua 40 minutes 3 seconds

What do you call the connectivity client token?

Godwin, Joshua 40 minutes 8 seconds

Now my problem is every single you know application that needs this has you know

these classes. This is 1 token factory outside and inside you know it has.
Godwin, Joshua 40 minutes 24 seconds
The same, you know, classes copied. Probably this is, you know, something that we can improve. And what I also noticed in the ddc services, which I didn't you know.
Godwin, Joshua 40 minutes 39 seconds
Really optimise or get rid of is that we also have one full library just for you know reading the destination.
Godwin, Joshua 40 minutes 50 seconds
I don't know why we did it that way, but anyway.
Godwin, Joshua 40 minutes 56 seconds
All this library does is read you know the destination URL. So keep in mind also you know when you add dependencies right? Try to keep your new application as lean as possible.
Godwin, Joshua 41 minutes 13 seconds
And that also brings me to another point. I see some people are not using.
Godwin, Joshua 41 minutes 21 seconds
This patched you know starter that we have from SAP. This will reduce the amount of you know security alerts that you get because all you have to do is as long as you are here.
Godwin, Joshua 41 minutes 40 seconds
Most of them are default, you know managed. There are some you know.
Godwin, Joshua 41 minutes 46 seconds
Things that we you know that we use extra which are not managed in this starter, but even that I think we can improve. There's another bill of materials I think it's called Java dependencies but I've never.
Godwin, Joshua 42 minutes 6 seconds
You know tried, I think at least the security patch Spring boot starter is enough and it auto. It automatically takes care of patching any vulnerabilities here. So keep in mind.
Godwin, Joshua 42 minutes 22 seconds
That our guideline is we have to use you know the spring starter from SDS, OK. Anything else that I wanted to highlight?
Godwin, Joshua 42 minutes 40 seconds
I think this is also something that I have heard Audie mentioned multiple times. Do not use, you know, repositories directly. Try to put them in services so people will understand exclusively and they will reuse properly. You can wrap the logic.
Godwin, Joshua 42 minutes 59 seconds
And my recommendation, so even here you see, you know, a bunch of things. It it is, you know, quite difficult to understand. You know what each is and what we're doing. I like this personal opinion. Personal classification.
Godwin, Joshua 43 minutes 19 seconds
Have.
Godwin, Joshua 43 minutes 21 seconds
For services, the API you know services are the ones that directly call. You know the DDC API. You have authorization, then you have your domain. Your domain is all your, you know, business logic, then infra destination service and whatever you want and internal internal can be.
Godwin, Joshua 43 minutes 40 seconds
All your e-mail, LDAP, the audit trail which is, you know, internal logic and of course you can have scheduler. This is just one classification that I came up with for your application. Whatever you start working on or anything, try to, you know classify, try to make you know.
Godwin, Joshua 44 minutes 2 seconds
Code more organised so people you know can easily you know, as soon as they come, if they are new or if they want to find something you know they will know where to look at easily.
Godwin, Joshua 44 minutes 17 seconds
At least again, this is again my personal opinion. So these are some of the things that I wanted to show. And Audi, I don't know. I think I overran time. If you have anything else to add.
DO
Daniel, Or (external - Service)

44 minutes 28 seconds44:28

Daniel, Or (external - Service) 44 minutes 28 seconds

Yeah.

Daniel, Or (external - Service) 44 minutes 30 seconds

We have 4 minutes, but I don't think we can start now, but I hoped we could talk about the security more or assign a representative as a security.

Daniel, Or (external - Service) 44 minutes 47 seconds

A guideline writer.

Godwin, Joshua

44 minutes 47 seconds44:47

Godwin, Joshua 44 minutes 47 seconds

Yeah. OK. So in the four minutes that we have, what all do you want to, you know this thing high level when it comes to security, what do you wanna do?

DO

Daniel, Or (external - Service)

44 minutes 57 seconds44:57

Daniel, Or (external - Service) 44 minutes 57 seconds

I can't talk about it in few minutes.

HG

Helbron, Galit

45 minutes 1 second45:01

Helbron, Galit 45 minutes 1 second

OK. Thank you. First of all, thank you, Joshua. And yeah, we can continue on our next call. I'm not sure we have any call till end of year and some of you are going for a vacation.

Godwin, Joshua

45 minutes 2 seconds45:02

Godwin, Joshua 45 minutes 2 seconds

Yeah.

HG

Helbron, Galit

45 minutes 20 seconds45:20

Helbron, Galit 45 minutes 20 seconds

But we will proceed next time.

Godwin, Joshua

45 minutes 26 seconds45:26

Godwin, Joshua 45 minutes 26 seconds

OK.

HG

Helbron, Galit

45 minutes 26 seconds45:26

Helbron, Galit 45 minutes 26 seconds

Any questions?

DO

Daniel, Or (external - Service)

45 minutes 29 seconds45:29

Daniel, Or (external - Service) 45 minutes 29 seconds

Yeah.

Godwin, Joshua

45 minutes 30 seconds45:30

Godwin, Joshua 45 minutes 30 seconds

But the scheduler local debug I wanted to get this for everyone, including Audi who doesn't do it.

HG

Helbron, Galit

45 minutes 35 seconds45:35

Helbron, Galit 45 minutes 35 seconds

Important, yes.

DO

Daniel, Or (external - Service)

45 minutes 38 seconds45:38

Daniel, Or (external - Service) 45 minutes 38 seconds

I will have time to call you.

Godwin, Joshua

45 minutes 42 seconds45:42

Godwin, Joshua 45 minutes 42 seconds

It saves, it saves a lot of lot of lot of time. I don't know why, you know you're not trying.

DO

Daniel, Or (external - Service)

45 minutes 43 seconds45:43

Daniel, Or (external - Service) 45 minutes 43 seconds

And I'm going to set it up.
